

TAMPING TOOL

The tamping tools from the production of **RSM Fertigungstechnik** impresses with their slim design. The ergonomic construction of the tamping tool keeps the immersion resistance as low as possible.

This type of shaping has proven itself in recent years perfectly. Many years of experience of the forging manufacturer in the field of railway construction, coupled with perfectly trained CNC technicians result in a very durable tamping tool.

In addition, **RSM Fertigungstechnik** guarantees the highest quality in the selection of carbide metals.

OVERVIEW OF THE BENEFITS

- ergonomic design
- low immersion resistance
- extremely durable
- short delivery time
- individual customer requests possible
- optional version with side protection
